The Epworth Sleepiness Scale

How likely are you to doze off or fall asleep in the following situations? You should rate your chances of dozing off, not just feeling tired. Even if you have not done some of these things recently try to determine how they would have affected you. For each situation, decide whether or not you would have:

- No chance of dozing = 0
- Slight chance of dozing = 1
- Moderate chance of dozing = 2
- High chance of dozing = 3

Write down the number corresponding to your choice in the right-hand column. Total your score below.

Situation	Chance of Dozing
Sitting and reading	• 0
Watching TV	• 0
Sitting inactive in a public place (e.g., a theater or a meeting)	• 0
As a passenger in a car for an hour without a break	• 0
Lying down to rest in the afternoon when circumstances permit	• 0
Sitting and talking to someone	• 0
Sitting quietly after a lunch without alcohol	• 0
In a car, while stopped for a few minutes in traffic	• 0

Total Score =

0

Analyze Your Score

Interpretation:

- 0-7: It is unlikely that you are abnormally sleepy.
- 8-9: You have an average amount of daytime sleepiness.
- 10-15: You may be excessively sleepy depending on the situation. You may want to consider seeking medical attention.
- 16-24: You are excessively sleepy and should consider seeking medical attention.

REPORT

- **Liver:** is average in size reflecting diffuse homogenous moderate increased echopattern...bright liver...for laboratory correlation. No intra-hepatic biliary radical dilatation.
Small geographical hypoechoic area most likely of focal fatty sparing seen at the right hepatic lobe at the gall bladder bed, averaging 11x12mm.
- **P.V.:** is patent with average caliber.
- **G.B.:** is distended showing normal wall thickness with echofree lumen.
- **CBD:** shows average caliber with no stones within the visualized segment.
- **Spleen:** average size with homogenous echopattern. No focal lesions.
- **Pancreas:** masked by gases.
- **Right kidney:**
 - Shows normal site, size and shape. Normal echogenic criteria, preserved parenchymal thickness with good cortico-medullary differentiation.
 - No stones or back pressure changes.
 - No cysts or masses.
- **Left kidney:**
 - Shows normal site, size and shape. Normal echogenic criteria, preserved parenchymal thickness with good cortico-medullary differentiation.
 - No stones or back pressure changes.
 - No cysts or masses.
- **Peritoneum:** no ascites.
- **Urinary Bladder:** is partially filled at time of scan, with no stones or gross masses.
- **Pelvis:** normal pelvic overview.
- **Prostate:** is average in size, 18 cc in volume, with no gross focal lesions could be noted.

Opinion:

- **Bright liver, with small focal area of fatty sparing as described above, for laboratory correlation.**
